

ABSTRACT

The present invention relates to an interlabial pad with a high prevention effect of menstrual blood leak, which can be easily fitted between female labia.

An object is to provide an interlabial pad which can decrease leak generated on

- 5 the right and left hand side of the body side and achieve a sure and sanitary
wearing.

The interlabial pad (1) has a dual structure formed of a main sheet body (2) and a sub-sheet body (6) and both sheet bodies are bonded in the front end and the back end and both sides are unbonded. Thereby, the main sheet body

- 10 alone is deformed to have a convex shape to be inserted between labia of a wearer. At the same time, a mini sheet piece (14) is attached on the opposite side face to the body of the interlabial pad (1) so that a finger can be inserted in a hollow part (7) formed between the mini sheet (14) and a back side sheet (62).
